## What Customer's are Saying about GP 2010

*"With Microsoft Dynamics GP 2010, we eliminated tedious, error-prone, manual processes with an automated solution so we could focus on the strategic goals of our department. We were successful in turning a two-week drudgery into a few hour process. Working with Boyer & Associates made this automated transition much easier."*

Andy Fuller, Finance Manager  
Prime Alliance Solutions, Inc.

## GP Client Event Highlights

We wrapped up another great Microsoft Dynamics GP client event this month, and if you missed it, we wanted to share with you some of the highlights:

- We kicked off the day with keynotes by Ron Pederson and Erik Vigesaa covering many new enhancements available in Microsoft Dynamics GP 2010. If you haven't already, we recommend that now is a great time to schedule an upgrade as we've had the opportunity to work with several of our clients who have upgraded to GP 2010 and feel the product is solid and stable.
- Over lunch (sponsored by [Avalara](#)) Jack Boyer shared one Chicago-based client's experience. Using Avalara's sales tax web services, the client went from 4 hours to process a sales order to just 15 minutes per sales order. They automated this process by importing many thousand line sales orders and having the web services insert the sales taxes after checking to make sure that neither the tax rate nor the taxability of the items had changed.
- Andy Fuller from Prime Alliance Solutions, Inc., a Microsoft Dynamics GP 2010 user, shared with the audience how he has saved four hours every time he processes invoices by using the electronic invoicing capabilities in GP 2010. Boyer & Associates also assisted his company by importing data that was being rekeyed in order to save even more time.

With 35 attendees on hand, everyone had time to network, share best practices and learn from one another. It was a great learning experience for everyone. If you weren't able to attend and would like to learn more, [contact us](#) for more information or [click here](#) to access the content from the event.

We look forward to seeing you at our **Year-End Client Event in December** and thank you again for your business.

## Meet EthoTech - ISV Spotlight

Would you like to get more out of Microsoft Dynamics GP?

How much time do you and your staff spend looking for valuable data that should have been easier to find? Or, maybe you invest too much time recalculating commissions that you did not get right the first time? Have you ever promised a customer immediate shipment when the product was out of stock?

ISV to add depth if needed

These are just a few problems that can cost you and your staff valuable time and money. [EthoTech](#) has designed software enhancements that can empower your staff and increase their productivity. EthoTech products are built right into Microsoft Dynamics GP. As your staff uses Microsoft Dynamics GP, EthoTech products work behind the scenes giving you added functionality and efficiency.

EthoTech's solutions include:

**EthoTech Commission Plan** - An automated commission management system with seamless integration into Microsoft Dynamics GP. The user interface is identical so you cannot tell when you are in an EthoTech screen versus a GP screen.

**Microsoft Dynamics GP Enhancements** - Customer Service Collection (checks for duplicate PO's and assigns credit limit process holds), Enhanced Password Security (ensures protection of your financial data while supporting SOX compliance mandates), and Next Numeric Collection.

#### Microsoft Dynamics GP Tip of the Month

Are you tired of SmartList columns not being in the default order you would like or seeing Credits before Debits? Did you know you can change the default columns and order of columns on a SmartList?

By going to Microsoft Dynamics GP >> Tools >> Setup >> System >> SmartList Options, you are able to change the default columns on the master SmartList as well as the default order. Just select the SmartList you would like to change, mark or unmark the

columns you would like as the default and use the arrow buttons to create the column order you would like to see.

The image shows a screenshot of the 'SmartList Options' dialog box. The window title is 'SmartList Options' and the user is 'sa Fabrikam, Inc.' with the date '4/12/2017'. The 'Category Defaults' section includes a 'Category' dropdown set to 'Account Transactions', a 'Default Go To' dropdown set to 'View', and a 'Maximum Records' field set to '1,000'. Below these are several checkboxes for columns: 'Journal Entry' (checked), 'Series' (checked), 'TRX Date' (checked), 'Account Number' (checked), 'Account Description' (checked), 'Credit Amount' (checked), 'Debit Amount' (checked), 'Currency ID' (unchecked), and 'Currency Index' (unchecked). To the right of these checkboxes are four arrow buttons for reordering. At the bottom of this section are 'Mark All', 'Unmark All', and 'Default' buttons. The 'Search Defaults' section contains two checkboxes: 'Mark the Match Case checkbox by default when performing searches.' (unchecked) and 'Enable the Match Case checkbox on the SmartList Search window.' (checked). At the bottom right are 'OK' and 'Cancel' buttons.
